

How To Update Collection_03

Perfect 🔥

Now replace your entire `js/search.js` with this Version 2 code:

```
/* =====  
  SEARCH  
===== */
```

```
const searchInput =  
document.getElementById("searchInput");
```

```
searchInput.addEventListener(  
  "input",  
  handleSearch  
);
```

```
function handleSearch(){
```

```
  const value =  
    searchInput.value  
    .toLowerCase()  
    .trim();
```

```
  if(value === ""){
```

```
    renderCards(sections);
```

```
    return;
```

```
  }
```

```
  const filteredSections =  
    sections.filter(section=>{
```

```
      if(  
        section.title  
        .toLowerCase()  
        .includes(value)
```

```
      ){
```

```
        return true;
```

```
      }
```

```
    return section.categories.some(category=>{
```

```

        if(
            category.title
            .toLowerCase()
            .includes(value)
        ){
            return true;
        }

        return category.subcategories.some(sub=>{

            if(
                sub.title
                .toLowerCase()
                .includes(value)
            ){
                return true;
            }

            return sub.items.some(item=>

                item.name
                .toLowerCase()
                .includes(value)

            );

        });

    });

});

renderCards(filteredSections);

}

```

🚀 Version 2 Upgrade Complete

Now refresh browser:

Ctrl + Shift + R

How To Add New Content Now

Add New Section

Inside data.js

```
{
  title:"Projects",
  icon:"🚀",

  categories:[

    {
      title:"JavaScript",

      subcategories:[

        {
          title:"Games",

          items:[

            {
              name:"FizzBuzz",
              url:"https://example.com",
              type:"link"
            }
          ]
        }
      ]
    }
  ]
}
```

Add New Category

Inside a section:

```
{
  title:"AI",

  subcategories:[

  ]
}
```

Example:

```
{
```

```
title:"AI Tools",

subcategories:[

  {

    title:"Chatbots",

    items:[]

  }

]

}
```

Add New Subcategory

```
{

  title:"CSS",

  items:[]

}
```

Example:

```
{

  title:"React",

  items:[]

}
```

Add PDF

Put file in:

assets/

Example:

assets/css-notes.pdf

Then:

```
{

  name:"CSS Notes",

  url:"../assets/css-notes.pdf",

  type:"file"

}
```

Add Website Link

```
{

  name:"ChatGPT",

  url:"https://chatgpt.com",

  type:"link"

}
```

}

One Important Check

Open the browser console:

F12

→ Console

If you see any red error, send me a screenshot or copy the error text.

Because your data.js may still need to be converted fully into the new categories → subcategories → items format for every section, not just Documentation. If cards are not showing, that's likely the reason.
